The answer to every welding need

ERGOPLUS torches are the largest and most successful range of Trafimet products.

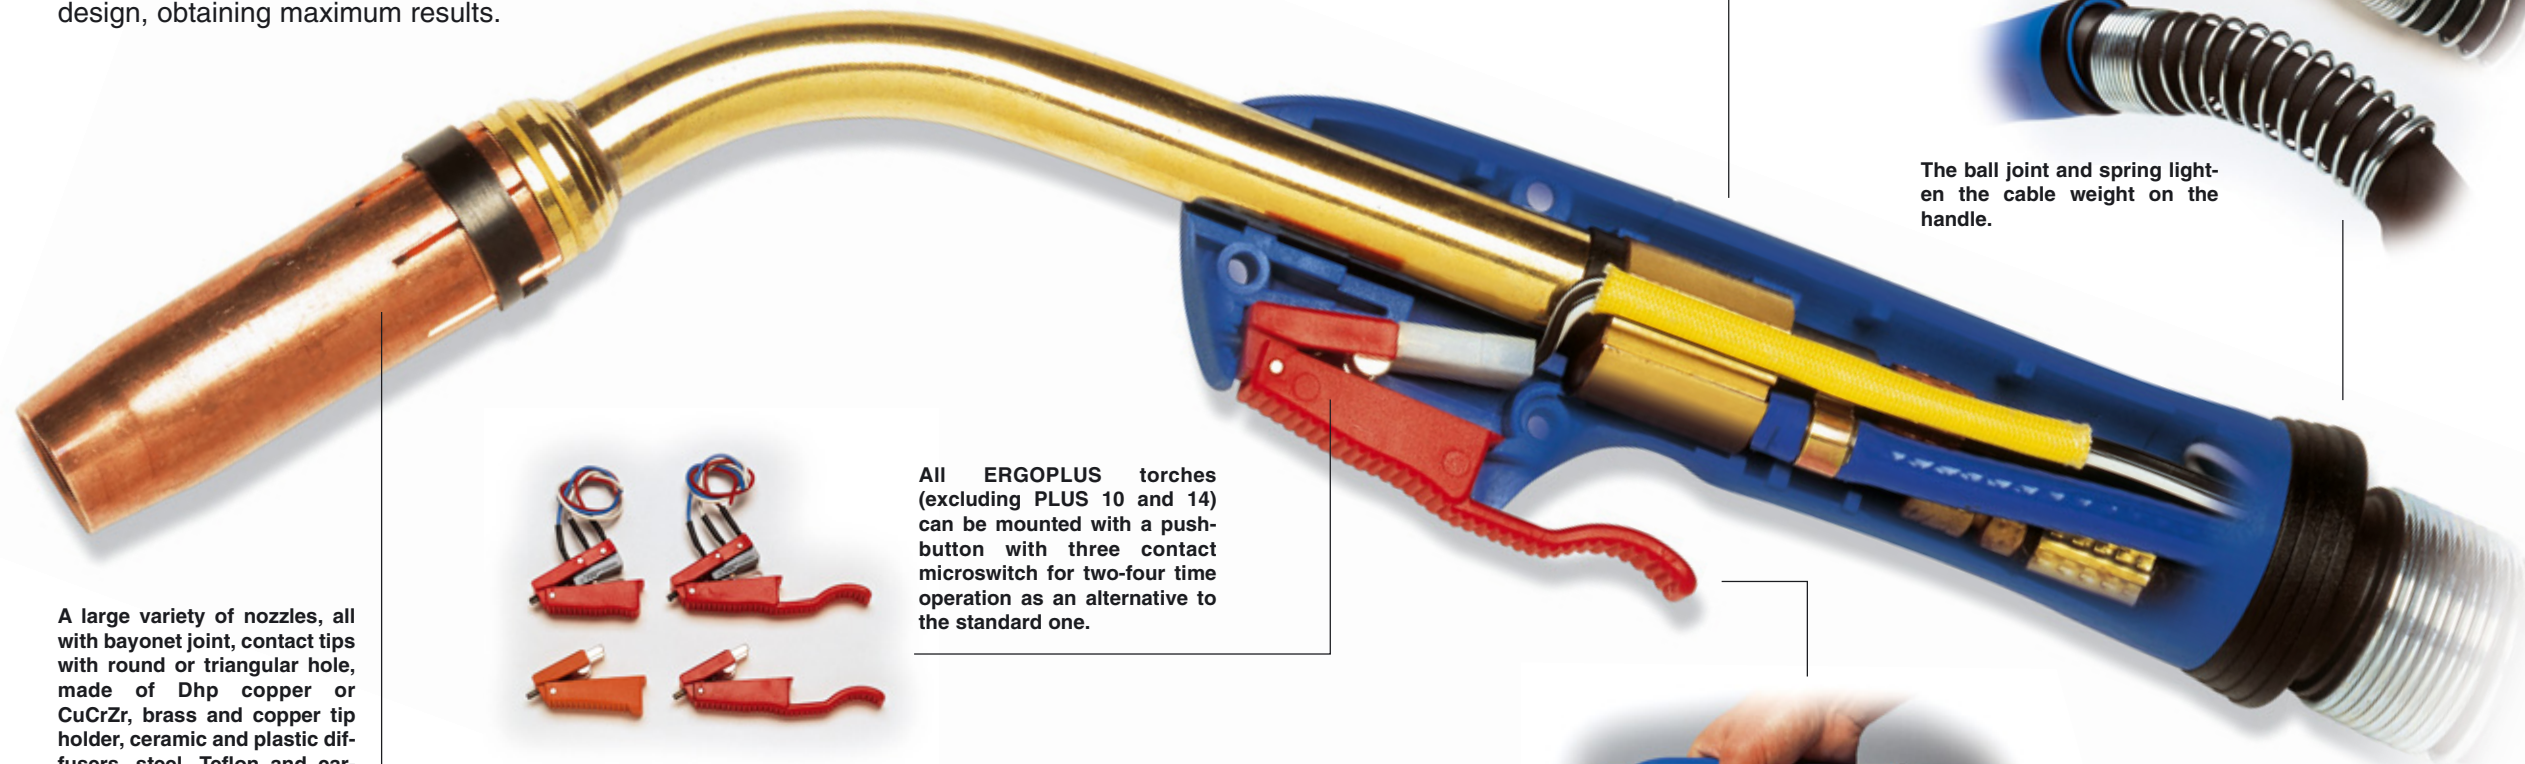

7 different air-cooled manual models and 5 water-cooled models enable the user to find the right solution for every need.

The ERGOPLUS range, interchangeable with the principal Binzel® torches, completes Trafimet's commitment to the strengthening of its research and development sector; this range of torches was the testing ground in which the company succeeded in its intent to combine quality and product design, obtaining maximum results.

Both the current-carrying cable and wire connections (for torches with this kind of cooling) are very robust and made to permit easy maintenance.

All ERGOPLUS torches can be equipped with an Euro adaptor, either fixed or spring pins.

Binzel® is registered trademark of Abicor GmbH.

A large variety of nozzles, all with bayonet joint, contact tips with round or triangular hole, made of Dhp copper or CuCrZr, brass and copper tip holder, ceramic and plastic diffusers, steel, Teflon and carbon liners ... a variety of parts for every occasion!

All ERGOPLUS torches (excluding PLUS 10 and 14) can be mounted with a push-button with three contact microswitch for two-four time operation as an alternative to the standard one.

The handle design is very modern... slim and manageable... these are the sensations felt by those who hold an ERGOPLUS torch in their hands for the first time...

AIR COOLING

WATER COOLING

The handle is ergonomic to give a well-balanced grip.

The ball joint and spring lighten the cable weight on the handle.

The long button permits retreated grip when it is necessary to distance yourself from the thermal rays of the welding arc.

The rear attachments are inside high resistance boxes and the cable is protected by a steel spring which permits soft bending and excellent wire sliding.
